STANDARD

# TEMPERATURE SENSORS

Specially developed for low temperature and high humidity applications.

## MAIN FUNCTIONS

NTC temperature sensors are manufactured from a thermally sensitive resistor element that has a negative coefficient (Negative Temperature Coefficient)

Offers mechanical, thermal, and electrical stability, along with a high degree of sensitivity. Acts in monitoring and warnings on the instrument panel are immediately triggered, detecting faults or unusual temperature changes

Temperature is an essential parameter for engine operation, and the sensor is one of the most important parts of the cooling system

## CHARACTERISTICS

### TEMPERATURE SENSOR WITH ABS CAGE

Ideal for use in the return and air duct, in buses and minibuses.

### STAINLESS STEEL TEMPERATURE SENSOR

Ambient, coil (freezing) and/or external sensor. It has a stainless steel encapsulation, a more robust cable with tinned copper wires and reinforced insulation at the cable junction.

### ABS TEMPERATURE SENSOR

ABS encapsulated sensors ensure great durability in humid environments, often used for cold applications.
